

## OPTICAL FLARES NUKE INSTALLATION FOR MAC:

- **STEP 1:** Put ***OpticalFlares.dylib*** file, the ***Menu.py*** (that came with our plug-in download content), the ***OpticalFlares.png*** file, and the ***VideoCopilot.png*** in this location:

**Macintosh HD/Library/Application Support/Nuke/8.0/plugins/**

***\*\*(Root Library and NOT User-Library)\*\****

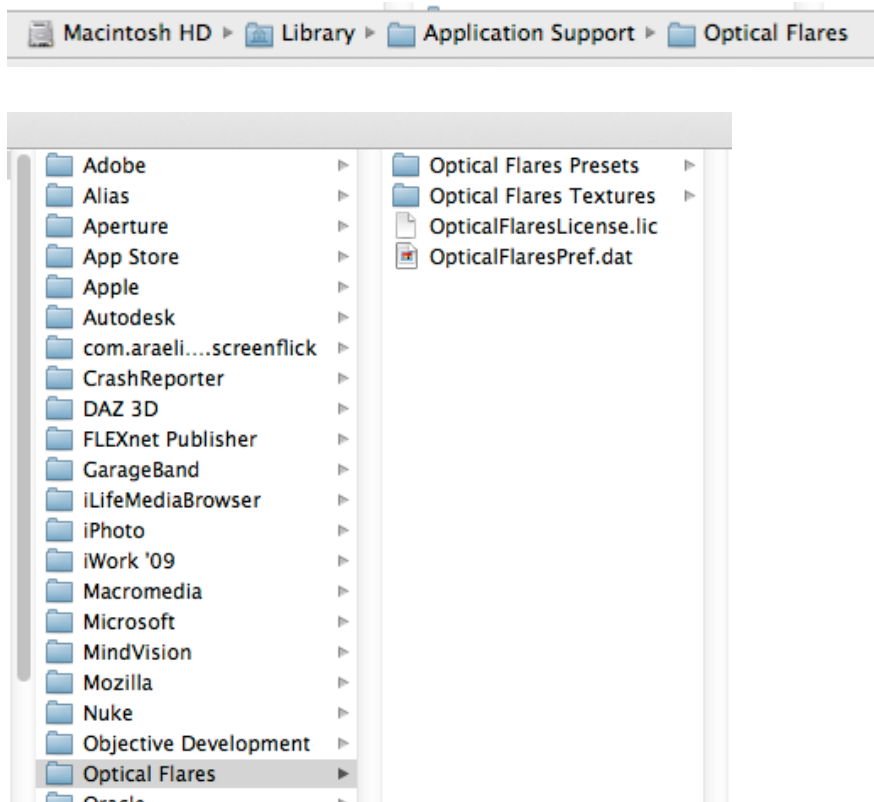

***\*\*You need to create this path if it does not exist\*\****

- **STEP 2:** The *Textures* folder, the *Presets* folder and the *OpticalFlaresLicense.lic* file need to go here:

## Macintosh HD/Library/Application Support/Optical Flares

*\*\*(Root Library and NOT User-Library)\*\**

*If they are not in the root Library folder then you will not be able to see the Optical Flares plug-in/VC Icon in order to open the plug-in.*
